### Chemical composition

Mass fraction in %

What this alloy is

● Iron — the balance, never listed by a standard — 97.5 % ● Mn — 1.6 % ● Si — 0.5 % ● C — 0.4 % ● Traces & impurities · 0 %

Logarithmic scale, 0.01 % to 100 % — every value here compares directly, decade by decade.

The scale is logarithmic, not the element's raw share of the alloy — the only honest way to fit 0.01 % and 100 % in one picture, and it means every value here can be compared with every other.

### Predicted transformation temperatures

Not enough recorded composition to predict a transformation temperature for this grade — missing: Ni, Cr, Mo.
