

MATERIAL NUMBER 1.0415 · CLASS 1.0

D 25-2

Material no. 1.0415

also listed as C26D

Chemical composition, mechanical and physical property values, and 8 standard designations from 6 regions.

DENSITY 7.85 g/cm ³	OTHER DESIGNATIONS 8 in 6 regions	PROPERTY VALUES 11 on file
--	---	--------------------------------------

Chemical composition

Mass fraction in %

Logarithmic scale, 0.01 % to 100 % — every value here compares directly, decade by decade.

The scale is logarithmic, not the element's raw share of the alloy — the only honest way to fit 0.01 % and 100 % in one picture, and it means every value here can be compared with every other.

Predicted transformation temperatures

computed from composition · °C

PREDICTED AE3 800 °C	PREDICTED AE1 719 °C	PREDICTED ACM 493 °C	PREDICTED BS 580 °C
-------------------------	-------------------------	-------------------------	------------------------

Note on use. The data is compiled to the best of our knowledge from publicly available standards and manufacturer documentation. It replaces neither material testing nor an inspection document to EN 10204. Please request a mill certificate to EN 10204 2.1, 3.1 or 3.2 together with your enquiry. The standard in its current valid edition always prevails.
