

MATERIAL NUMBER 2.4061 · CLASS 2.4

LC-Ni 99,6

Material no. 2.4061

Chemical composition, mechanical and physical property values, and 9 standard designations from 3 regions.

DENSITY	OTHER DESIGNATIONS	PROPERTY VALUES
8.89 g/cm³	9 in 3 regions	10 on file

Chemical composition

Mass fraction in %

Logarithmic scale, 0.01 % to 100 % — every value here compares directly, decade by decade.

The scale is logarithmic, not the element's raw share of the alloy — the only honest way to fit 0.01 % and 100 % in one picture, and it means every value here can be compared with every other.

Predicted transformation temperatures

Not enough recorded composition to predict a transformation temperature for this grade — missing: Ni, Cr, Mo.

Physical properties

1 values

Note on use. The data is compiled to the best of our knowledge from publicly available standards and manufacturer documentation. It replaces neither material testing nor an inspection document to EN 10204. Please request a mill certificate to EN 10204 2.1, 3.1 or 3.2 together with your enquiry. The standard in its current valid edition always prevails.
