Chemical composition

Mass fraction in %

What this alloy is

● Iron — the balance, never listed by a standard — 51.6 % ● Cr — 21 % ● Ni — 21 % ● Mo — 3.6 % ● Traces & impurities · 2.8 %

Logarithmic scale, 0.01 % to 100 % — every value here compares directly, decade by decade.

The scale is logarithmic, not the element's raw share of the alloy — the only honest way to fit 0.01 % and 100 % in one picture, and it means every value here can be compared with every other.

Predicted transformation temperatures

This grade's composition falls outside the published model's validated range (a low-alloy composition window), so no transformation temperature is predicted here.

Mechanical properties

8 values across 3 conditions

CONDITION · DIMENSION	RM N/mm ²	RE N/mm ²	
to 600	490	215	
CONDITION · DIMENSION	RM N/mm ²	RE N/mm ²	A5 %
Sheet trick, GOST 7350-77	590	295	30
CONDITION · DIMENSION	RM N/mm ²	RE N/mm ²	A5 %
Sheet thin, GOST 5582-75	540	245	25

Note on use. The data is compiled to the best of our knowledge from publicly available standards and manufacturer documentation. It replaces neither material testing nor an inspection document to EN 10204. Please request a mill certificate to EN 10204 2.1, 3.1 or 3.2 together with your enquiry. The standard in its current valid edition always prevails.
