

MATERIAL NUMBER 1.3343 · CLASS 1.3

# 1.3343

Chemical composition, mechanical and physical property values, and 46 standard designations from 19 regions.

|                              |                                               |                                      |
|------------------------------|-----------------------------------------------|--------------------------------------|
| DENSITY<br><b>8.12</b> g/cm³ | OTHER DESIGNATIONS<br><b>46</b> in 19 regions | PROPERTY VALUES<br><b>10</b> on file |
|------------------------------|-----------------------------------------------|--------------------------------------|

## Chemical composition

Mass fraction in %

What this alloy is

Logarithmic scale, 0.01 % to 100 % — every value here compares directly, decade by decade.

The scale is logarithmic, not the element's raw share of the alloy — the only honest way to fit 0.01 % and 100 % in one picture, and it means every value here can be compared with every other.

## Predicted transformation temperatures

Not enough recorded composition to predict a transformation temperature for this grade — missing: Ni.

## Physical properties

1 values

| PROPERTY | VALUE | UNIT              |
|----------|-------|-------------------|
| Density  | 8.12  | g/cm <sup>3</sup> |

## Designations across standards

46 designations · 4 documented as identical
