

MATERIAL NUMBER EN-JL1020

# 0115

## Material no. EN-JL1020

also listed as EN-GJL-150

Chemical composition, mechanical and physical property values, and 37 standard designations from 22 regions.

|                                          |                                               |                                     |
|------------------------------------------|-----------------------------------------------|-------------------------------------|
| DENSITY<br><b>7.85</b> g/cm <sup>3</sup> | OTHER DESIGNATIONS<br><b>37</b> in 22 regions | PROPERTY VALUES<br><b>2</b> on file |
|------------------------------------------|-----------------------------------------------|-------------------------------------|

| Chemical composition                                         | Mass fraction in % |
|--------------------------------------------------------------|--------------------|
| No chemical composition is on file for this material number. |                    |

| Predicted transformation temperatures                                                                                    |
|--------------------------------------------------------------------------------------------------------------------------|
| Not enough recorded composition to predict a transformation temperature for this grade — missing: C, Mn, Si, Ni, Cr, Mo. |

| Physical properties | 2 values |                   |
|---------------------|----------|-------------------|

**Note on use.** The data is compiled to the best of our knowledge from publicly available standards and manufacturer documentation. It replaces neither material testing nor an inspection document to EN 10204. Please request a mill certificate to EN 10204 2.1, 3.1 or 3.2 together with your enquiry. The standard in its current valid edition always prevails.
